ARE YOU READY FOR 6.0?

HAVING A READINESS ASSESSMENT IS KEY PRIOR TO MAKING THAT DECISION

- **Are you a hospital contemplating implementing Focus 6.0?**
- **Do you have a small information technology department?**
- **Do you wonder what this change would mean for your facility?**
- **Do you know who is pushing this decision and why?**
- **Do you rely on software outside of Meditech and wonder how a change would affect these systems?**
- **Are you aware of other options?**

With the hype of Focus 6.0 and the robust clinical functionality claims, hospitals are having difficulty evaluating what the change would mean to their facility. The decision will touch every department and is quite exciting for most areas. With the additional complexities of ARRA, pay for performance, and other initiatives, these decisions can have overwhelming implications. Evaluating and quantifying is necessary and exceedingly important.

CPEOPLE can help evaluate the claims and focus on your facility and the implications. With a Focus Readiness Assessment, CPeople can help you through your decision process by uncovering the real needs, expectations, and options available. There might be other options that haven't been explored.

With decades of experience in Information Systems and the Meditech environment, our staff understands the challenges and complexities of the Meditech environment. We will give you an honest perspective for you to weigh your alternatives.
