CORRECT REIMBURSEMENT CALCULATION (PRORATION RULES)

Facilities are losing significant revenue every day. Are your insurance carriers paying the correct contracted rate? With the complexity of payment methodology, many insurance computer systems are simply not sophisticated enough to

calculate payments accurately. Some claims might be manually entered by a payer representative who may not adjudicate the claim based on your specific contract.

Because no one has time to analyze every payment every day, **PRORATION RULES ARE EXTREMELY IMPORTANT IN IDENTIFYING TRENDS AND RECOVERING LOST REVENUE.** If your payment does not match your expected reimbursement, then you have a variance. This variance is captured and reported in MEDITECH's Contract Management Report routine.

Managed care contracts can be a simple or a very complex combination of stop loss, per diem, case rates, carve outs and fee schedules. MEDITECH's Reimbursement Management routines can calculate your expected reimbursement at the time of billing, giving you a more realistic picture of your accounts receivable.

CPEOPLE will help your facility to recoup underpayments, identify problem payers and significantly improve cash flow by calculating correct expected reimbursement.

With decades of experience building and testing effective proration rules, CPEOPLE consultants will deliver precise and accurate rules by:

- Designing proration rules according to your managed care contracts in a test environment
- Schedule a time to move tested rules to live
- Test rules in your live system to ensure they are accurate
- Create reports to capture your underpayments
- Provide staff training as needed
- Assist in establishing an appeals process
