# AUTOMATE COLLECTIONS WITH REMINDERS

Cash flow is imperative in the healthcare environment. Meditech reminders are an electronic and automated system to prompt a user for an important action. Whether it be an automated reminder to follow up on an insurance claim or a manually entered reminder to the chargemaster coordinator to audit a charge, Reminders can help automate many processes and business functions in your facility..

## **Processing Reminders**

Work lists are easily created when a reminder is put into the system. With multiple criteria for sorting, Meditech allows total flexibility to sort in a variety of ways and allows access to account data from the list. Allowing access to the necessary information to effortlessly resolve the issues.

## **Productivity Reporting**

MEDITECH provides a summary report that allows management to print reminder activity that occurred during a certain time period for a range of users. This report shows by user:

the total number of reminders due, how many were resolved and a comment about the manner used to resolve the reminder.

CPEOPLE's consultant team has decades of experience with all MEDITECH collection routines and can build your dictionaries and provide training for your staff. We can show you how your staff can be more effective by managing accounts on an exception basis. CPEOPLE can change your manually intensive collection process to an automated, highly productive process.
